# University collaboration in RDI projects 2019-2024

Partners of the University of Helsinki and LUT University in RDI projects in  
Päijät-Häme. Results of a survey conducted by Lahti University Campus.

# Background

- Lahti University Campus annually invites researchers from UH and LUT working in Päijät-Häme to
  - 1) list those RDI projects that had collaborators and
  - 2) list the collaborators
- The aim is to obtain more information on the extent and impact of university cooperation, especially from a regional perspective.

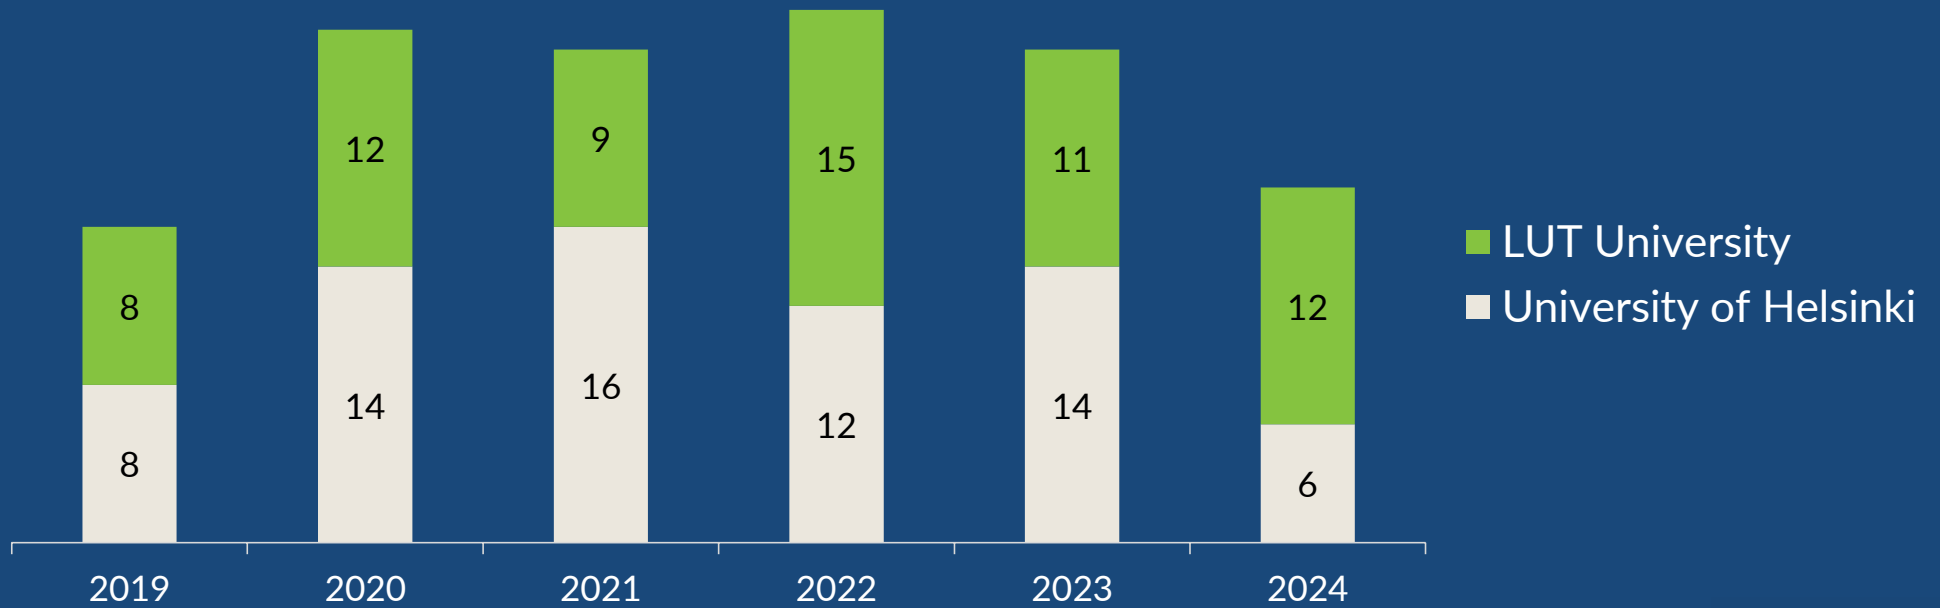

## About the results and their interpretation

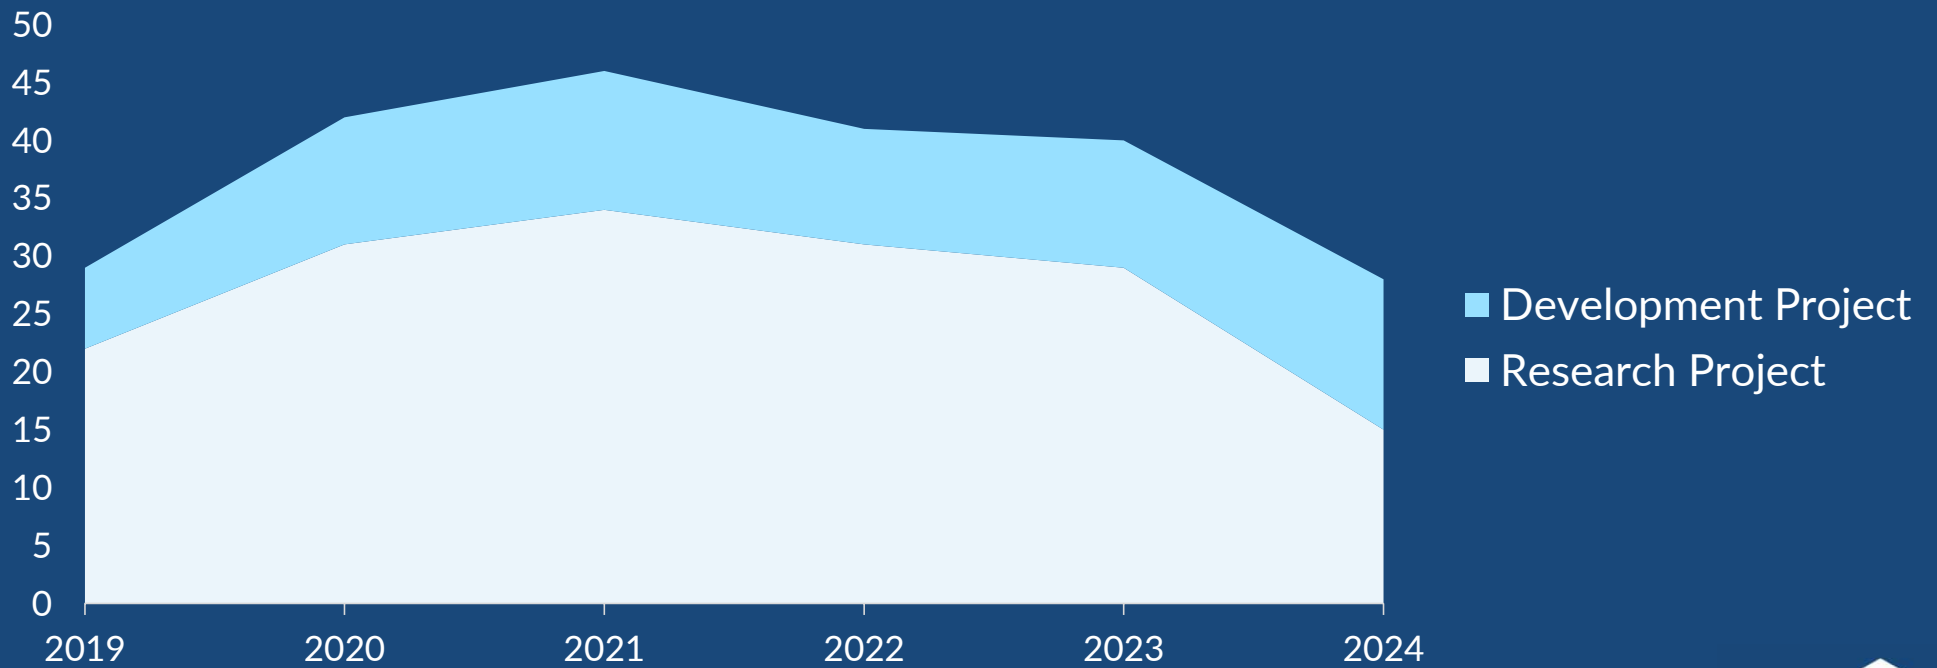

- A loose definition of a partner is used, including all those actively involved in the project.
- The questionnaire is voluntary. The results of each year are based on the activity of respondents.
- The results should be viewed as a window into the network of project actors. Direct comparisons between figures from different years should be avoided, as the starts or endings of individual projects with a high level of cooperation may otherwise be given undue weight.
- University cooperation is multifaceted and RDI projects are only one manifestation of this.
